CARGO POD

This is a multipurpose cargo pod, made in composite materials plus one mounting interface for several aircraft wing struts.

Dimensions:

Load Capacity: **15 KG**

Width: **470 mm**

Depth: **800 mm**

Height: **260 mm**

Volume of content: **0,10m**

The pod can be easily installed and removed from aircraft wing struts. It can be set-up to operate in 2 different angle positions. The POD is conceived with several lower holes to carry aerial imaging equipment, but it can also be provided without the lower panel's holes, to be used for several other applications.

Long durability item

Product manufactured in lightweight carbon and glass fiber, and the attachment structure made by high strength aluminum, LHColus Pod System resists to all required structural and environmental conditions.
